DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1, 2, 5 and 6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The upper limit of the range in the variable R" is incorrect. There are no known C_{12} aryl groups. Applicants' examples show a C_{10} aryl group, naphthalenyl. The next known aryl group is a C_{14} group. Please correct.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various

Application/Control Number: 10/520,378 Page 3

Art Unit: 1621

claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,965,756, cited by Applicants. The '756 patent discloses fused ring substituted indenyl Group 4 metal complexes useful as components of olefin polymerization catalysts having the formula (I)

$$R^{\text{II}} = \underbrace{\begin{array}{c} R^{\text{II}} \\ \\ \\ R^{\text{II}} \end{array}}_{R} R^{\text{II}} = \underbrace{\begin{array}{c} R^{\text{II}} \\ \\ \\ \\ \end{array}}_{R} MX_{p}X'_{q}X''_{r}$$

wherein the definition of the variables M, R', R", Z, X, X', X", p, q and r are set forth on column 1, lines 58-67 through column 2, lines 1-31. The '756 patent particularly exemplifies the compound having the following formula

Application/Control Number: 10/520,378

Art Unit: 1621

which differs from the claimed compounds in location of the aryl group. The compounds of the '756 patent have the C_6 aryl group in the 3 position whereas the instant claimed compounds have the C_6 aryl group is in the 4 position. See Example 2 in the instant specification, which have the following formula

However the above generic formula (I) encompasses the claimed compounds when R" (in the 4 position) is a hydrocarbyl group, particularly an aryl group. Therefore, it would have been obvious to one skilled in the art to select an aryl group in the 4 position with the expectation that it would possess the catalytic properties shown by the compounds of the '756 patent having an aryl group in the 3 position. Compounds which differ only in the placement of substituents in a

Art Unit: 1621

ring system is not patentable absent unexpected results. <u>In re Jones</u>, 162 F.2d 638, 74 USPQ 152 (CCPA 1947). Note Table 1 and 2 compare the instant compounds with a compound disclosed in the '756, however, the comparison compound is not the most structurally relevant compound, that is, a compound having an aryl group attached to the indacene structure. Therefore, the results of Table 1 do not provide convincing evidence of unexpected results since the compound used for comparison is not the closest prior art compound disclosed by the '756 patent.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Porfirio Nazario-Gonzalez whose telephone number is 571-272-0641. The examiner can normally be reached on Mon.-Fri. (9:30 AM - 6:00 PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Johann R. Richter can be reached on 571-272-0646. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
